Real Estate Information System

biggee
bigger than the biggest

Internet-based system that gives subscribers access to information on Vietnam's real estate market anytime, anywhere

Digitalization & transparency
Improvement of the real estate transparency through digitalization with comprehensive and detailed property data
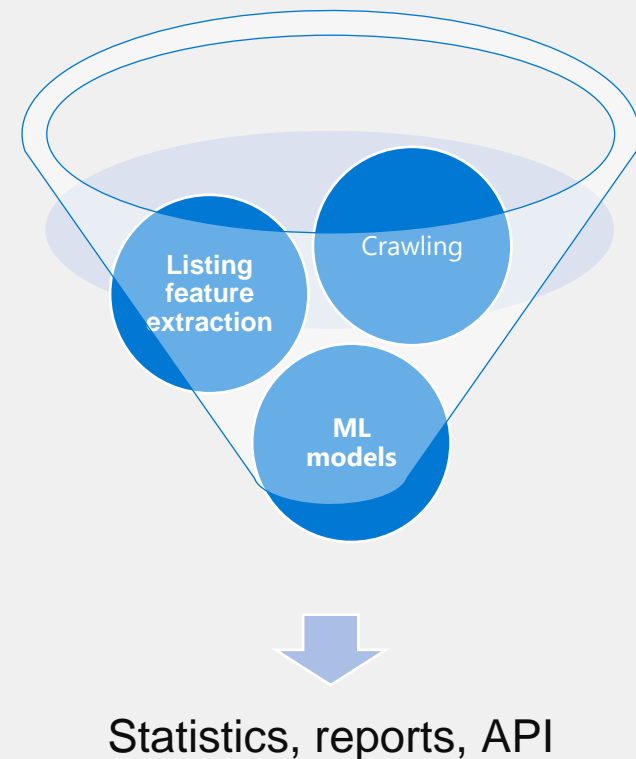

Automated valuation model
The online system for automated valuation model (AVM) is developed based on big data collected through information technology
Real estate data-driven platform

3 steps to improve data quality

1 Collect and analyze data from multiple sources to ensure coverage and objectivity.

2 Linking data by multi-dimensional (image, location, description, features…) to identify valuable information:

- **Data linking**: Build the association matrix between all the information base on: location, images, listing feature…
- **Data grouping**: Grouping similar information based on matrix association
- **Data cleaning**: Filter out listing with outlier distribution and duplicate listing in each group

3 Using Machine Learning to optimize the analytical model, make appropriate predictions.
